Janrick V. Panesa **TTL 1** **Learning Activity 3.1**

2B - BSED ENGLISH

1. **Flipchart**

Flipchart is important in the process of teaching and learning because it helps the students organize their lessons and information one step at a time. As a future teacher, I can present an information while discussing a topic that has multiple steps or ideas especially during my discussion in a particular subject. For example, in an English class, I can use each page in flipchart to show the definition, examples, and exercises about a certain topic mostly in grammar teaching.

2. **Wall Display**

Wall display is useful in teaching and learning. it can transform an ordinary classroom into a place where students can learn even in absence of a teacher. As a future English teacher, I can put up vocabulary words, grammar reminders, or motivational messages or quotes on the wall. The students can refer to it anytime thus the information will be more remembered by the learners. As a future teacher, I would also display my students' best work because I believe it can make them proud and motivated in their studying.

3. **Chalkboard**

For me, It is one of the most useful teaching materials inside the classroom because it is used to write important details about the topic and mathematical problems. As a future teacher, If my students do not understand a concept, I can give another example on the board or break the explanation into smaller parts. For example in English, when teaching sentence structures, I can write a sentence and show the students which words are the subject, verb, and object. I can also let the students write their own answers on the board making the lesson more interactive.

4. **Diorama**

Diorama is important because it allows the students to see a topic in a more realistic and concrete way. Instead of only listening to an explanation, the students can observe a model that represents the actual subject particularly an event. For example, if I were to teach about a particular setting in a story, I could use a diorama to show the place where the events happened. I also like that the students can make their own dioramas because it allows them to be creative and show what they learned.

5. **Nature Table**

Nature tables are useful because the students can learn directly from real objects rather than just looking at pictures in a book. As a future teacher, If I were to teach a lesson about plants, for example, I could place different leaves, seeds, flowers, and small branches on the table and let the students observe and compare them. Using the nature table in teaching makes it more interesting because the students

can actually see and examine the objects. It can also encourage them to be more curious and observant about their surroundings.
