Janrick V. Panesa **TTL 1**
2B-BSED EBGLISH

Learning Activity: 4.2 A

1. Describe the relationship of pedagogical knowledge with content knowledge as illustrated from the video.

Basically, Content Knowledge focuses on what you teach and Pedagogical Knowledge on how you teach it. The video I watched explains that it's not enough just to know your subject inside and out, and it's not enough to just be good at managing a classroom or planning lessons. A good teacher has to blend them together to achieve the expected learning outcomes. So, the relationship is that your teaching strategies (like group work, direct instruction, or inquiry) have to fit the specific subject matter you're trying to deliver so that students can actually understand the facts and concepts behind it.

2. Describe the relationship of the technological knowledge with content knowledge.

The relationship between technological knowledge and content knowledge is that it's all about figuring out which tech tools actually ideal for a specific subject. For example, in science, you might use databases to collect data, whereas in math, you might repurpose those same databases for a different kind of problem-solving. It's all about understanding how technology can change or enhance the way content is taught, rather than just forcing random tech into a lesson where it doesn't fit.

3. Describe the relationship of the technological knowledge with pedagogical knowledge.

Both of them is all about how we actually teach using technology tools. Since a lot of pre-service teachers haven't grown up with every single educational technology tool being used in a classroom, this relationship helps us figure out how to design lessons, manage pacing (like not teaching more than five technical skills at a time so students don't get overwhelmed or confused), set up equipment properly, and create tutorials. It connects our teaching strategies with the actual digital tools we use to deliver the instruction.

4. As pre-service teachers, how will this TPACK integration model guide you in using technology in the delivery of instruction?

As pre-service teachers, the TPACK integration model will guide us in choosing the right technology that matches our subject and teaching strategies. It also reminds us that technology should not be used just to make lessons more interesting, but also to help students understand the lesson better. For example, we can use PowerPoint presentations, educational videos, and interactive quizzes to make learning more engaging and easier to understand. By combining

technology, content, and teaching methods, we can deliver lessons effectively and meet the different learning needs of our students.

Honestly, for me, it takes a lot of the pressure off because it teaches us that we don't need to be tech geniuses who master every single app or gadget out there. Instead, it guides us to focus on exposure over mastery, learning which tools actually fit our topic and seeing how to model them slowly and effectively for our students.

Learning Activity: 4.2 B

SAMR Level	**Task or Learning Activities**
Redefinition	Students will create a short educational video explaining the rules of subject-verb agreement. They will include their own examples, share the video online, and receive feedback from classmates.
Modification	Students will work together using Google Docs to create sentences, identify subject-verb agreement errors, and edit each other's work in real time.
Augmentation	Students will answer an online quiz using Google Forms, which provides automatic checking and feedback to help them understand their mistakes.
Substitution	Students will answer a digital worksheet about subject-verb agreement using a computer or mobile phone instead of writing their answers on paper.
