Janrick V. Panesa **TTL 1**

2B-BSED ENGLISH

Learning Activity 5.2: Research on some online assessment tools and explain how it works.

1. Google Forms

teachers can use Google Forms to give students a short quiz or assessment after a lesson. For example, after the discussion of Parts of Speech in English class, the teacher can create a 10-item quiz where students need to identify nouns, verbs, and adjectives. Students answer the quiz using their devices (phones or computers). Google Forms can automatically check their answers and record their scores. After that, teachers can then use the results to see which part of the topic students understand and which topic need to be discussed again.

2. Kahoot!

teachers can use Kahoot! to make a review activity before an examination. For example, in an English class, the teacher can prepare questions about vocabulary, grammar, or a story that the class has discussed. And then, the teacher displays the questions on the classroom TV or through projector, while students answer using their phones. After each question, the results are shown with correct answer allowing the teacher to immediately see how many students answered correctly. This makes reviewing more interactive and engaging and it helps the teacher check students' understanding.

3. Socrative

teachers can use Socrative to conduct a quick assessment during or after a lesson or discussion. For example, after a lesson about the elements of a short story, the teacher can give students a short Socrative quiz where tudents answer using their devices, and the teacher can monitor their responses while the quiz is ongoing. If the results show that many students have difficulty identifying the setting or conflict, the teacher can explain those concepts again before moving to the next lesson. It makes Socrative useful for formative assessment and immediate feedback.
