Janrick V. Panesa **TTL 1** **Learning Activity 3.3**

2B-BSED ENGLISH

1. **Professor Garfield**

Based on the link I found. Professor Garfield was inspired by the cartoon character Garfield. It's used so that children can easily engage with it. Professor Garfield are created to provide educational resources for children to achieve digital literacy and for them to learn the proper and responsible use of the internet. It provides lessons about cyberbullying, online safety, and how to distinguish facts from opinions, especially when visiting websites. Children are reminded not to share important information online, especially those with the acronym "YAPPY" which stands for Your name, Address, Phone number, Password, and Your plans. Children are reminded to be careful about who they interact with.

As for me, I will use that information as a guide because the lesson especially the fact and opinion, may help me become more careful when looking for information from websites, especially when writing my school research and assignments. I can also apply the online safety tips by protecting my personal information and also being careful about the people and the content I interact with on the internet.

2. **Common Sense Media**

Common Sense Media is a Digital Citizenship Curriculum that provides lessons and activities for different grade levels. In short it's created for the children. It's objective included human-centered approach (designed with students mental health in mind), interactive and play-based (engaging videos, games, and off-screen activities for kids), expanded coverage (140 lessons new lessons), and easy to switch (low prep, easy to teach lessons with helpful transition guides). It teaches for healthy technology habits, privacy and safety, digital footprints and identity, relationships and communication, cyberbullying and online harms, and information and media literacy. The site also provides specific lessons about protecting personal information, understanding privacy, understanding online risks, and making responsible decisions, especially when using digital technology.

I will use all those information I read from this site to improve my way of using social media, websites, and other online digital platforms. For example, I will be more careful about what I share online especially at Facebook and I will think about the possible consequences before posting something online. I can use all the lessons from this site as a reference for future activities and assignments related to digital citizenship.

3. **Lesson Plan Boosters: Digital Literacy and Online Ethics**

This sites provides lessons about digital and media literacy, information literacy, netiquette, and cyber ethics. The main discussion from this site is how people's actions and statements from online can have real human and legal consequences. The site provides lessons with questions and activities that encourage students especially grade 8 - 12 to think about online speech, harassment, cyberbullying, and whether a certain online actions and behavior are ethically appropriate. Specifically, this site encourages students to develop guidelines for responsible online behavior.

For me, I will use this information as a guide for my own behavior when communicating and interacting online. After reflecting in this site, I promised for myself that I will think carefully before posting, commenting, and sharing things online because maybe my actions can affect other people especially when it comes to their beliefs, traditions, and culture, I'll be online sensitive not to offense anyone. I will also practice netiquette and respect other people's rights and privacy.
